Table of Content

How to use

Using pdb:

- Run script with pdb:

    ```
    python -m pdb module.py
    ```

- Using pytest:

    ```
    pytest test_* --pdb
    ```

    I use the second!

Important commands

To set a breakpoint:

```
import pdb
pdb.set_trace()
```

Commands in the debugger:

l(ist)	Lists the current code environment
c(ont)	Continues to the next breakpoint
n(ext)	Go to the next codeline
s(tep)	Go to the next codeline or enter subfunction
q	Exits debugging mode
